if it implemented correctly and in accordance with the national building regulations, leads to the optimization of energy consumption and increases the lifespan of the structure and that is why it is called the heart of the building. Most of the repairs and renovations of buildings are caused by weakness in the facility system, and on the other hand, low-quality equipment increases the energy costs of the building several times, for this reason, the buyers are particularly sensitive to this issue.

Yavar koohi CEO of Pakab Farayand Novin com-

The filter or sediment trap is placed inside the packages and heating systems, which using the magnetic method that is one of the latest methods of improving water quality, can perform the sediment removal process in the system so that there is no disturbance in the performance of the packages. Due to the changes in the market and the presence of competitors, our company made various changes in the field of production, and currently more than 5 types of products of this collection have been patented.

Omid Ahmadi Technical director of Iromex company

As the heart is the cause of life for humans, the facilities are also necessary for the building and the reason for the continuation of life in it; Because a building without proper facilities is practically useless. The main challenge in the facilities industry is in the monitoring sector. Unfortunately, there is no good monitoring in this field. The lack of valid standards in the construction industry is also another challenge in this field. Unfortunately, the level of our standards has nothing to say in the world, while companies can export if they have obtained their quality certificate from a reputable country.

Shahriyar Behmardi Commercial manager of Parsian Air Conditioning Company

This Company, by gathering high-quality products from reputable domestic and foreign brands, is trying to take an important step towards providing building facilities, especially in the field of ventilation. The main purpose of air conditioning is to provide comfortable conditions for humans. In places where conditions are provided for people's comfort and well-being, of course, the mental and physical health of people increases and their productivity increases.

Amirhosein Soleimani Quality control manager of Golpayegan pipe production group

Golpayegan Polymer has been able to rely on the knowledge and expertise of its experienced staff in the field of water and sewage transmission system, building ventilation system, pressurized irrigation system, transmission of electric and telecommunication cables and well wall pipes, with the knowledge and expertise of its experienced staff. Also, benefit from high quality and compliance with the world's standards. The facilities in the building play an undeniable role, because like many things, it is not visible and the occurrence of the smallest problem in this part can cause huge expenses for the users or even create an irreparable accident.

Mohsen Nasri Expert in mechanical installations of air conditioning

Observance of the rules and executive principles will increase the useful life of the building and its safety and beauty will be guaranteed. In the facility design and supervision department, fortunately, we see the presence of capable and expert companies that are introduced to the owner through the engineering work referral system. But we do not see this organization in the implementation depart-

Abbas Ariyannejad Managing Director of Tehran Polymer Yara in

Considering the importance of drinking water, the polyethylene produced in this collection can destroy 600 types of water bacteria because this production unit cares about the health of people who use polyethylene capacitors. Our production capacitors have a five-year warranty, although the compensation only covers tanks that have met the standard installation conditions.
