Hasasn Mohamadi
Manager of Zarin Kharmai
Montaz Bafaq

Zarin Kharmai Montaz Bafaq Collection has launched its health-oriented products on the market using modern devices equipped with the latest technology and relying on an expert team and extensive research. The date industry, unlike other food products, suffers from the lack of experts; because the processing of this product requires a special technology and because it is not specialized in this field, Experience should be used that it is very expensive and requires investment. Lack of branding of dates, inappropriate packaging, lack of development of organic date production and its export, lack of quality control systems in date products are among the most important challenges of production and supply of date products.

Hasan Najib
Manager responsible for digital
printing of Nigarfan

Yazd printing manager is currently in good condition and growing in most fields of printing. Of course, Yazd province is weak in the field of offset printing, but it has acted strongly in areas such as rotogravure, flexo and heliogravure printing; currently, many reputable food brands such as Kale and other companies that operate in the field of food production. However, unfortunately, the printing industry is one of the industries whose value and dignity is not recognized as a big industry in Yazd province. In other words, the printing industry is intertwined with people's lives, but unfortunately, neither other industries nor even the government officials of Yazd province still have a correct understanding of the position of this field. But despite all the shortcomings, I am hopeful for the future of the printing industry.

Mehdi Dehghan
Manager of Kasra Printing and
Packaging Complex

Any production field that you consider needs a suitable and beautiful packaging at the last stage; therefore, it is necessary to have appropriate investments in this sector to guarantee the life of the printing industry not only in Yazd province but also in the country. One of the most important problems of the printing industry at present is the supply of consumables, the fluctuations in the prices of raw materials have closed the hands of most printing houses to a great extent, and we need the support of the authorities in this area.

Hadi Heidari
Market research and develop-
ment manager of Shirreza Group

One of the signs of the success of this collection is relying on the slogan "native expertise and global technology"; because this slogan has become the basis for innovation and providing equipment, machinery and production lines of Shirreza Group. In fact, the key to the longevity of a business and an industry in general is innovation and production of new products, which is particularly evident in the food sector. Of course, the high variety of the product is not the winning card of a collection, but the production of a serious product is the key to staying in today's highly competitive market.

Peyman Oloumi
Deputy CEO of Mehshad Yazd
Company

Considering the direct relationship between human food health and animal feed, it is necessary to pay attention to the protein and food substances in animal feed as one of the elements in the human food cycle. In the meantime, domestic production is much more cost-effective in terms of health due to the direct supervision of the Ministry of Health on production; because monitoring and quality testing is very important in the production of products.

Saman Dehghan
Manager of communication with
the customer of Dehghan box
making and packaging

In the box industry, the production of cardboard boxes is used for packaging various products and has many fans. Cardboards are among the manufactured goods, the absence of which creates serious problems for the producers of various industries. It is not possible to imagine a product without packaging and wrapping; for this purpose, all manufactured items are supplied in packages that include paper, cardboard, and various types of cardboard.

Alireza Ahmadi
Sales expert of the
koosheshkaran Machinery
Company

Packaging is the most basic requirement of any product before it is released to the market and the simplest method to protect food and guarantee the health of the product until it reaches the customer. Therefore, the quality, the way it works, the technology used in it and the different applications of the device are among the important and effective factors in choosing packaging devices. The standard packaging of food products must have a suitable shape, and by creating diversity in the shapes used in the design of food packaging, one can gain an advantage over competitors.

Ahmadreza Jafari
Employee of Pirouz Pak
Machinery Company

The use of solids packaging machine, especially in various industries, including food, pharmaceutical, health and industrial industries, can help to improve the shelf life and quality of products. One of the most important points in the field of activity in the field of food packaging is the use of up-to-date and modern technologies in the field of packaging. The use of new technologies in the field of packaging of all kinds of goods, including food, leads to a reduction in costs and also preserves the health of consumers. In fact, the technologies used in the fields of designing and manufacturing modern packaging devices are the winning card of Pirouz Pack. The use of standard raw materials to prepare all kinds of hygienic food packaging and the efficiency of nano technology in the production of food packaging are also among the other competitive advantages of this company's products.
